ABOUT ME

Full-stack engineer with more than 15 years of experience building software. Recent focus on backend development with Go (3+ years) and frontend work with React (10+ years).

EXPERIENCE

Full-stack Engineer   Remote
Epwery   2022–2025

- Designed and implemented Go backend services integrated with Salesforce and Stripe.
- Built an idempotent Stripe webhook reconciliation worker, reducing payment mismatches and improving collection accuracy.
- Developed automated email notification workflows, improving reliability and user engagement.
- Increased test coverage on critical modules, reducing post-release bugs by up to 50%.
- Optimized CI pipelines with selective tests, saving 5–15 minutes per PR and improving delivery speed.
- Contributed to React components (including portals) and performed daily cross-team code reviews.

Full-stack Engineer — Prior roles   Remote & On-site
Various companies   2015–2022

- Delivered production features in Java, Angular, and Node.js.
- Participated in sprint planning and code reviews, and coordinated tasks in Agile teams.
- DropCar: Migrated a monolithic architecture to microservices and integrated Twilio for masked communications.
- COVID–19 project: Led frontend development, acting as Scrum Master and improving UX under tight deadlines.
- Synegen: Designed badge assignment logic for an e-learning platform (backend + UI).
